

## **IBANK FOR IPHONE 2.1 ADDS MOST-REQUESTED FEATURES TO LEADING MOBILE FINANCE APP New Functionality Includes Faster Transaction Entry, Transaction Search, Pull to Refresh**

PUTNEY, VT — IGG Software, Inc. today announced the release of iBank for iPhone 2.1, a significant update to its powerful money management app for iOS 8. iBank for iPhone 2.1 delivers significant improvements including quicker transaction entry with the ability to choose a default account and automatic selection of the last opened document, transaction search, and “pull to refresh” updating. These changes enhance the app’s existing features such as its robust budgeting, investment management, Touch ID authentication, and clean, new design.

“After releasing iBank for iPhone on the heels of iOS 8, we got right back to work to add new features that users want most,” said Ian Gillespie, president of IGG Software. “We kept our focus on providing users with an even easier to digest, accurate, up-to-date picture of all their finances on the go.”

Ready for iPhone 6 and 6 Plus, the app brings powerful money management tools to anyone with iOS 8 on their iPhone or iPod touch. It empowers users to set up all account types and add new transactions on the go; to track personal budgets and help control spending; to review investments and monitor trades, dividends, returns or other activity in one’s holdings. While iBank for iPhone allows for standalone use with all-manual entry, an optional subscription to iBank’s exclusive Direct Access service delivers automatic downloading of account updates as they become available.

Users of iBank 5 for Mac also have the option of syncing their accounts, budgets and investments with iBank for iPhone, or sharing an existing Direct Access subscription with the app. iBank for iPhone’s money management tools are unparalleled. Key features include:

- *Fast transaction entry* lets users add or edit account activity with just a few taps. They can use Touch ID to open locked documents, and fast, location-based vendor lookup to add payees and autofill categories.
- *Simple yet sophisticated budgeting* is a key component of iBank. Users can easily create a monthly budget, check to see if they are sticking to it with a daily progress bar, or drill down to see the exact transactions affecting that budget. Budgets can also be synced with iBank 5 for Mac.
- *Investment management* has never been more powerful in a handheld device. It’s easier than ever to review trades, positions, history, performance, market value and more. Portfolios update with automatic quote downloads as changes are available.
- *Direct Access* (an optional connectivity service) delivers account updates from thousands of financial institutions worldwide, via Wi-Fi or data connection, with no prompting by the user — anytime and anywhere.

Users of iBank for iPhone also have full manual editing and entry capabilities, including the ability to split and categorize transactions; the ability to move different financial “books” between devices; multi-currency support; and many more powerful finance management tools. The app can be used by itself or in conjunction with iBank 5 for Mac, and takes full advantage of the iPhone’s latest processors and high-resolution Retina Displays. Regular price at the App Store is \$9.99, and the app requires iOS 8.

For automatic updating of transactions, new users of iBank for iPhone can try Direct Access for free during a 30-day trial. Maintaining the service can cost as little as 11 cents a day: just \$4.99 per month, or \$39.99 for an annual subscription. All options are available via In-App Purchase, and existing Direct Access subscriptions on an iPad or Mac may be shared with the app.

iBank for iPhone is ad-free. There are no third-party services offered to users. Customer data and financial records are never stored, accessed, aggregated or analyzed in any way that benefits IGG or any other marketers. And IGG never sells, trades, rents or shares customer information.
