FOR IMMEDIATE RELEASE

IGG Soft's iBiz 3.1 Adds Powerful Tax Features and More

Putney, Vermont - IGG Software, LLC announces the release of iBiz 3.1, a new version of its popular time-billing and invoicing application for Mac OS X 10.4 (www.iggsoftware.com/ibiz). iBiz 3.1 adds support for complex tax calculations including compounding, and whether tax is applied on a per-project or per-event basis. Invoicing, reports and startup time have also been improved. The server version now allows better reliability and options when users checkout projects and work on them away from the server. For example, users can now add new clients while checked-out and sync the new clients to the server when they reconnect. The new version is recommended to all users and overall adds over 20 new improvements. iBiz 3.1 is a free upgrade for registered users of iBiz 3.

iBiz 3 is priced at $49.99 ($19.99 for upgrading users of iBiz 2). iBiz Server 3 is priced at $89.99 and includes two free client codes; the upgrade price for iBiz Server 3 is $39.99.

IGG Software is committed to developing powerful, yet easy to use personal and small business applications. Since its inception, IGG Software's products have been recognized by Apple Computer as well as Macworld, MacUser, and many other prominent Macintosh publications. IGG Software, LLC, was started by Dr. Ian Gillespie in 2002 to develop enterprise strength applications for everyday Mac users. For more information please visit us online, www.iggsoftware.com
