## **IBIZ 4 ANNOUNCED: MAJOR UPDATE TO TIME-TRACKING AND BILLING APP**

**First version to support Mac OS X Leopard, integrates iCal**

(PUTNEY, VT) – IGG Software announces the forthcoming release of iBiz 4, a full-version upgrade to its market-leading application for time-tracking, billing and project management. This new release (\$50, or \$25 to registered iBiz users) will be available for download in the first quarter of this year.

“We’ve been eager to update the product to take better advantage of Leopard’s potential,” said Ian Gillespie, President of IGG. “With feedback from a growing base of customers, we are delivering a major upgrade to iBiz.”

“The combination of Mac OS X Leopard and our advanced hardware makes it easier than ever for Mac developers to create powerful, innovative applications,” said Ron Okamoto, Apple’s vice president of Worldwide Developer Relations. “We’re thrilled that IGG is taking advantage of Core Animation and iCal in Leopard.”

- iBiz 4 leverages the performance of Mac OS X with new animated graphs powered by core animation and a completely new iCal sync engine for projects, events, to-do lists, invoice due dates with alarms, and other timeline-driven aspects of project or billing management.
- New in iBiz 4 are Statements, making it easy to send an overview of all past billing activity. Users can select to send invoices and payments from a specific date range, or select specific items to include in statements. iBiz 4 also adds new templates for statements, invoices and reports.
- A multitude of interface refinements to iBiz 4 also enhance the user experience. Among the improvements are a new pop-up inspector to quickly edit project information; a modified main window for better access to and organization of to-dos, files or events; the ability to organize clients into groups, or to view client subtext with balances or past-due info; simplified + (add) or - (delete) buttons for projects or clients; and many other changes that create a smoother, more intuitive UI.
- Also upgraded to version 4, iBiz Server/Client extends its lead as the most networkable app in its class. For law offices, ad agencies, design firms or any enterprise with multiple users generating billable hours, iBiz grows as the business does, with a seamless upgrade process – even from the single-user version.

IGG Software, LLC, was founded in 2003 by developer Ian Gillespie. Located in Putney, Vermont, the company engages in sustainable practices such as purchasing all of its energy from renewable sources.
